

In this example, we will get the **Total Count** where the **Proposition** is the Proposition we have assigned to the **Action** that **MX0** is evaluating the **Eligibility** for.

As there is no aggregation needed, we first open the **DIP**, select the field we want:

Choose a data item

 - Action Attributes

Total count

Propositions / Total count

Retrieve the Total count for Propositions where

Proposition name =

Please select

Cancel

Next

Next, we apply our filter. We do this by selected the option **Current proposition** from the drop down:
