

In this example, we will get the **Last Occurrence** where the **Proposition** is "Root", and the **Activity Type** is "AT 1".

As there is no aggregation needed, we first open the **DIP**, select the field we want:

Choose a data item

Total count

Last occurrence

Propositions / Activities / Last occurrence

Retrieve the Last occurrence for Propositions where

Proposition name = Root

Retrieve the Last occurrence for Activities where

Activity Type name = AT 1

Cancel

Next

Finally, we save our rule:

Proposition - Last Occurrence - Root + AT 1

Enter a brief description of your Eligibility Rule

Last occurrence of Root + AT 1
