

In this example we will get the most recent **Datetime of Last View** for all **Actions** whose name includes "Usecase - Popup".

First we need to make a supporting rule that gets us the **Campaign Code** assigned to the **Action** that **MXO** is evaluating the **Eligibility** for:

Action Attributes - Campaign Code

Enter a brief description of your Eligibility Rule

Campaign code	...								
---------------	-----	--	--	--	--	--	--	--	--

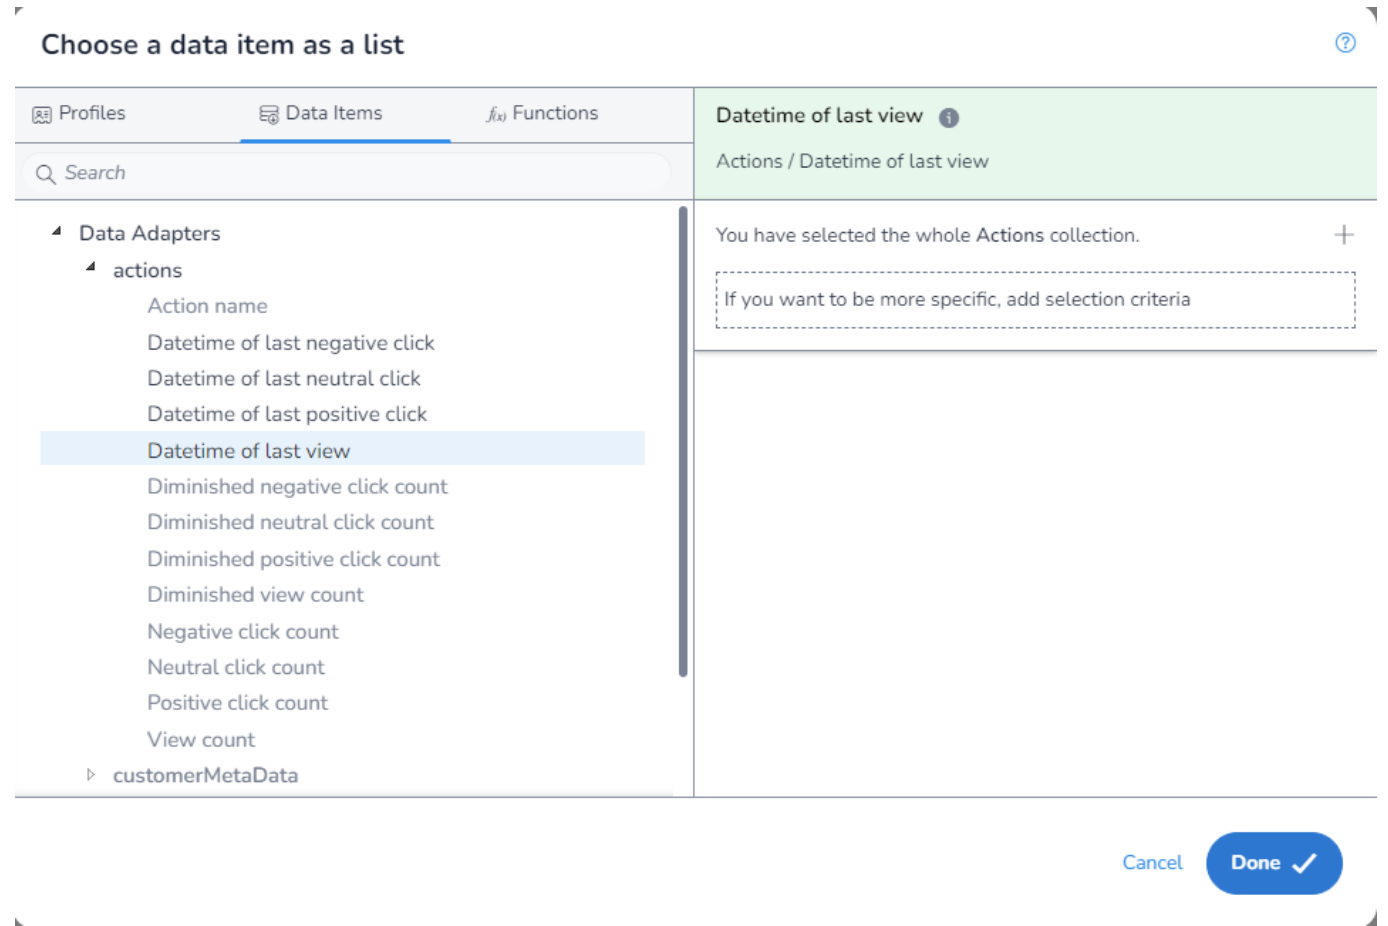

As we are aggregating, we first need to select which aggregation **function** we are using. We will be using **Latest date in** to get the value of **Datetime of Last View** from the matching **Actions**:

Action - Last View - Includes Action Attribute - Campaign Code

Enter a brief description of your Eligibility Rule

latest date in	<div></div>	...							
----------------	-------------	-----	--	--	--	--	--	--	--

Next, we open the **DIP**, select the field we want:

You will notice that as we have used this **function**, when we enter the **DIP** we are limited to only fields that return a **datetime** and that we are not required to apply any filters.

Next, we apply our filter:

Choose a data item as a list
