

In this example, we will get the **Activity Count** where the **Proposition** is "Root", and the **Activity Type** is "AT 1".

As there is no aggregation needed, we first open the **DIP**, select the field we want:

Choose a data item

ProfilesData ItemsFunctions

Search

Data Adapters

actions

customerMetaData

device

propositions

Activities

Activity Type name

Activity count

Diminished count

Last occurrence

Completed

Cumulative count

Cumulative diminished count

Proposition code

Proposition name

Total count

Activity count

Propositions / Activities / Activity count

Retrieve the Activity count for Propositions where

Proposition name = Please select

Retrieve the Activity count for Activities where

Activity Type name = Please select

CancelNext

Next we apply our filter:

Choose a data item as a list

ProfilesData ItemsFunctions

Search

Data Adapters

actions

customerMetaData

device

propositions

Activities

Activity Type name

Activity count

Diminished count

Last occurrence

Completed

Cumulative count

Cumulative diminished count

Proposition code

Proposition name

Total count

Total diminished count

Activity count

Propositions / Activities / Activity count

Retrieve the Activity count for Propositions where

Proposition name = Root

Retrieve the Activity count for Activities where

Activity Type name = AT 1

CancelNext

Finally, we save our rule:

Proposition - Activity Count + Root + AT 1

Enter a brief description of your Eligibility Rule

Activity count	of Root + AT 1	...			
----------------	----------------	-----	--	--	--
