

In this example we will get the most recent **Datetime of Last Neutral Click** for all **Actions** whose name includes "Usecase - Popup".

First we need to make a supporting rule that gets us the **Campaign Code** assigned to the **Action** that **MXO** is evaluating the **Eligibility** for:

Action Attributes - Campaign Code

Enter a brief description of your Eligibility Rule

Campaign code	...								
---------------	-----	--	--	--	--	--	--	--	--

As we are aggregating, we first need to select which aggregation **function** we are using. We will be using **Latest date in** to get the value of **Datetime of Last Neutral Click** from the matching **Actions**:

Action - Last Neutral Click - Includes Action Attribute - Campaign Code

Enter a brief description of your Eligibility Rule

latest date in	<div></div>	...							
----------------	-------------	-----	--	--	--	--	--	--	--

Next, we open the **DIP**, select the field we want:

Choose a data item as a list

customerMetaData

Datetime of last neutral click

Actions / Datetime of last neutral click

You have selected the whole Actions collection.

If you want to be more specific, add selection criteria

Cancel

Done

You will notice that as we have used this **function**, when we enter the **DIP** we are limited to only fields that return a **datetime** and that we are not required to apply any filters.

Next, we apply our filter:

Choose a data item as a list
