

In this example, we will get the sum of **Last Occurrences** where the **Proposition** is the **Proposition** we have assigned to the **Action** that **MXO** is evaluating the **Eligibility** for and its children, and the **Activity Type** contains the text "Checkout -".

First, we need to make a supporting rule that gets us the **Proposition Path** assigned to the **Action** that **MXO** is evaluating the **Eligibility** for:

Choose a data item

Eligibility Rules

Action Attributes

- Action name
- Campaign code
- End date
- Has effective date range
- Marketing priority
- Proposition code
- Proposition name
- Proposition path
- Start date

Proposition path

Action Attributes / Proposition path

Cancel

Done

We can then save this rule:

Action Attributes - Proposition Path

Enter a brief description of your Eligibility Rule

Proposition path

...

This **Proposition Path** will match the **Proposition** we have assigned to our **Action** and its children. In order to make our rules consistant between when we want to include or exclude the parent, we will wrap this rule is a new rule:

Action Attributes - Proposition Path - Inclusive

Enter a brief description of your Eligibility Rule

Action Attributes - Proposition Path ...

As we are aggregating, we first need to select which aggregation **function** we are using. We will be using **Latest date in** to get the latest date from the **Last Occurrence** for each matching **Proposition** & **Activity Type**:

Proposition - Activity Count - Current Proposition Inclusive + Includes 'Checkout -'

Enter a brief description of your Eligibility Rule

sum of the elements in ...

Next, we open the **DIP**, select the field we want:

Choose a data item as a list

Data Adapters

- actions
- customerMetaData
- device
- propositions
 - Activities
 - Activity Type name
 - Activity count
 - Diminished count
 - Last occurrence
 - Completed
 - Cumulative count
 - Cumulative diminished count
 - Proposition code
 - Proposition name
 - Total count

Activity count

Propositions / Activities / Activity count

You have selected the whole Propositions collection.

If you want to be more specific, add selection criteria

You have selected the whole Activities collection.

If you want to be more specific, add selection criteria

Cancel

Done

You will notice that as we have used this **function**, when we enter the **DIP** we are limited to only fields that return a **Datetime** and that we are not required to apply any filters.

We will select the rule we made for the **Proposition**, and apply our **Activity Type** filter:
