

In this example we will get the **Diminished Activity Count** where the **Proposition** can be anything and the **Activity Type** is "AT 1".

As we are aggregating, we first need to select which aggregation **function** we are using. We will be using **Sum of the elements in** to get the total number of **Diminished Activity Count** for each matching **Proposition & Activity Type**:

Proposition - Diminished Activity Count - Any Prop + AT 1

Enter a brief description of your Eligibility Rule

sum of the elements in

Next, we open the **DIP**, select the field we want:

Choose a data item as a list

Done

You will notice that as we have used this **function**, when we enter the **DIP** we are limited to only fields that return a **number** and that we are not required to apply any filters.

Next, we will leave the **Proposition** filter blank, and apply our **Activity Type** filter:

Finally, we save our rule:

Proposition - Diminished Activity Count - Any Prop + AT 1

Enter a brief description of your Eligibility Rule

sum of the elements in [Diminished count of Any Prop + AT 1]

2 / 2
